WORKPLACE BEST PRACTICES

We advise that we are still ensuring our staff are adhering to safe work practices. The use of masks, respirators, gloves, hand sanitiser and social distancing are still in practice.

If you are in isolation or are a high risk group, please advise upon booking your work in.

Please be advised we do have staff members that have had flu vaccinations if you require.

INEVITABLE SUPPLY CHAIN ISSUES

As the pandemic continues across the globe, we advise that there is considerable fluctuations in the prices of materials, to the point that there have been daily price changes from our wholesalers.

We have also experienced delays with imported materials and shortages.

Many Applications
Safety, Energy efficiency, convenience

 
by Schneider Electric

The new outlets can be automated through an App called "Wiser" to turn appliances on and off throughout your home.

Clipsal have introduced this as their Standard range, with the technology to introduce technologies into their design as automation changes.

Iconic: Night Switch

The Night Walk Sensor Light is a subtle LED light that detects the slightest human movement.

ENERGY SAVING IDEAS FOR PEOPLE WORKING FROM HOME

1. Switch off artificial lights and use natural light

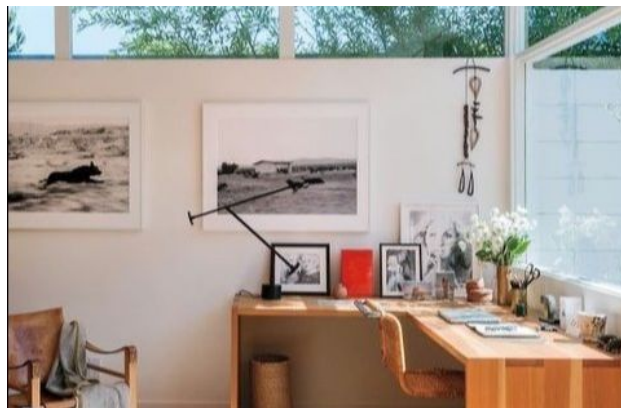

Artificial lights consume power-natural light is free

2. Choose energy efficient light bulbs

Less energy spent means less money wasted on electricity bills.

3. Choose laptops over desktops

Typically laptops use less energy compared to desktops.

4. Use energy saving features of all devices

Most printers, microwaves and air conditioners have energy saving features to use less energy.

5. Update all outdated equipment

Old electronic equipment traditionally uses more energy to operate over comparative new equipment. They can be recycled at an electronic waste near you.

6. Buy energy efficient devices

When buying new electrical equipment pay close attention to its energy efficiencies as it will save you money in the long term.

7. Switch off equipment when not in use

Just like lighting, make sure you switch off appliances when not in use. This includes air conditioners, coffee machines, microwaves, printers, copiers and scanners; especially on weekends and when on holidays.

8. Control your heating and cooling

Cutting down on the use of your air conditioner or simply adjusting the temperature to a comfortable level like 19 degrees will increase its efficiency and drastically reduce your bill. Simply cutting down outside drafts will also increase your air conditioners efficiency.

9. Consider installing solar panels

Most people working from home do so during daylight hours when solar energy is being produced so consider solar as a huge cost saver to your energy bill now you are working from home
